San Diego, CA | +1-(951)-446-9240 | palash.trip@gmail.com | [LinkedIn](#) | [Portfolio](#)

SUMMARY

Data Engineer & Analyst with 5+ years of experience specializing in data modeling, cloud-based ETL pipelines, and multi-tenant analytics platforms across AWS, PostgreSQL, and Microsoft Fabric. Proficient in SQL, Python, dbt, and Power BI translating raw data from complex source systems into reliable, decision-ready models for financial, operational, and supply chain teams.

TECHNICAL SKILLS

Languages & Framework: Python, SQL, DAX, Java, JavaScript, React, Angular, Spring Boot

Cloud & Data Platforms: AWS (S3, Glue, Lambda, Redshift, Kinesis, DynamoDB, Athena), Snowflake, Azure, Microsoft Fabric

Data Engineering: ETL/ELT Pipelines, Data Modeling, Data Warehousing, Apache Spark, PySpark, Kafka, Airflow, dbt, Data Lake, Data Quality

BI & Visualization: Power BI, Tableau, Apache Superset, Dashboard Development, KPI Reporting

DevOps & Tools: Docker, Kubernetes, Terraform, Git, CI/CD, Linux, Bitbucket, SAP, Primavera P6

Databases: PostgreSQL, MySQL, MongoDB, DynamoDB

Certifications: Microsoft PL-300 (Power BI), SQL (Dual-Certified), Python

WORK EXPERIENCE

E2 Consulting Engineers (SoCalGas) - Data Engineer

May 2025 – Present

- Architected scalable **ETL pipelines** in Python and SQL on AWS (S3, Glue, Kinesis Firehose, Redshift), automating data ingestion across 5+ business domains and reducing manual intervention by ~55%
- Built a **multi-tenant PostgreSQL analytics platform** with automated schema provisioning and row-level security, cutting client onboarding time by 60 - 70% while enforcing strict data isolation
- Implemented automated **data quality validation** across the AWS data lake using Glue Jobs, DynamoDB lookups, and PostgreSQL integrity checks, reducing pipeline errors by 35% and improving downstream reporting reliability
- Designed and scheduled **Airflow DAGs** to orchestrate dbt model runs and data ingestion jobs across the AWS pipeline, ensuring reliable execution order and automated failure alerting

Environment: Python, SQL, PostgreSQL, AWS (S3, Glue, Kinesis Firehose, Redshift, Lambda, DynamoDB), CI/CD, Linux

E2 Consulting Engineers (San Diego Gas & Electric) - Data Analyst & Engineer

May 2023 – May 2025

- Sole developer on the Strategic Undergrounding (SUG) initiative designed and deployed **50+ Power BI dashboards** serving operations, executive, financial, supply chain, and ML teams
- Built **dbt-style semantic models** and embedded real-time KPI dashboards in Power BI and Apache Superset using internal APIs, reducing manual reporting time by 40% and eliminating third-party dashboard licensing costs
- Developed **budget and construction forecasting models** tracking planned vs. actuals across miles constructed, enabling project teams to proactively identify cost overruns and adjust resource allocation before variance escalated
- Unified **5 disparate source systems** (AWS Athena, SAP HANA, SharePoint, Monday.com, Primavera P6) into a single analytics layer serving **100+ users across 6 teams** processing millions of rows to power operations, finance, supply chain, and executive reporting
- Built a live **Power Apps form** integrated with Power BI via DirectQuery, enabling PMs to capture real-time project notes that propagated instantly across operational dashboards eliminating manual reporting lag

Environment: DAX, SQL, Power BI, dbt, Apache Superset, Dataverse, Power Apps, Power Automate, Microsoft Fabric, AWS Athena, Git, CI/CD

Northern Trust Bank - Full Stack Engineer

Dec 2021 – Dec 2022

- Migrated monolithic architecture to scalable microservices using Java, Spring Boot, Docker, and Kubernetes improving deployment flexibility and system scalability across high-traffic workloads
- Built secure **RESTful APIs** with OAuth2 authentication and optimized SQL cluster performance to support high-availability data services
- Integrated **Azure Active Directory** for enterprise SSO across internal services, enforcing role-based access control for secure multi-team deployments

Environment: Java, Spring Boot, Docker, Kubernetes, Azure, SQL, OAuth2, REST, JIRA, Git

StonedGenie - Data Engineer I

May 2020 – Jul 2021

- Built forecasting models and automated inventory reports to improve stock planning accuracy and support more efficient operations
- Designed and maintained PostgreSQL databases with **query optimization, indexing, and stored procedures** and automated SQL-based ETL workflows for consistent data processing
- Developed **ML models** that increased customer CTR by 33% and enhanced targeted marketing effectiveness across campaigns

EDUCATION

Master of Science in Information Systems & Analytics

California Baptist University, Riverside, CA

Aug 2021

GPA: 3.9/4

Bachelor of Engineering in Information Technology

Savitribai Phule Pune University, Pune, India

May 2019

GPA: 8.1/10
