Education & Certificates

M.S. in Information Systems & Analytics from CBU in Riverside, CA

Status: Graduated

Work History

E2 Consulting Engineers (SoCalGas) – Data Engineer III, San Diego, CA

May 2025-Current

- Architected a multi-tenant Data Warehouse with ETL pipelines in Python on AWS with data modelling principles to reduce client onboarding time by 50% and expose only tenant-scoped data to external dashboards.
- Engineered complex SQL queries across 10+ databases to automate data validation checks, reducing manual QA efforts and errors.
- Designed and optimized Snowflake data models for utility operations, using dbt transformations and schema versioning to deliver feature-ready datasets powering TensorFlow ML models tracked via MLflow.
- Streamed real-time data from utility grids using Kafka and Spark Streaming to detect anomalies and trigger automated alerts, reducing equipment failure response time by 35%.
- Led development of an internal RAG library for an ML web app using OpenAI's LLM to enable context-aware RFP proposal generation, cutting turnaround time from days to hours.

E2 Consulting Engineers (San Diego Gas & Electric) - Data Analyst & Engineer, CA

May 2023 – May 2025

- Centralized 5 different data sources (AWS Athena, SAP HANA, SharePoint, Monday.com, Primavera P6) into a single analytics layer and deployed 50+ Power BI dashboards serving 200+ users across various teams.
- Managed the full SDLC by implementing CI/CD pipelines and agile methodologies to reduce software release cycles by 20% and improve code quality across team projects.
- Built data models and embedded real-time KPI dashboards in Apache Superset, reducing manual reporting time by 40% and eliminating embedded data visualization licensing costs.
- Built a live Power Apps forms, enabling PMs to capture real-time project notes that translated instantly across operational dashboards eliminating manual reporting lag.

Northern Trust Bank - Full Stack Engineer, Chicago, IL

Dec 2021 – Dec 2022

- Migrated monolithic architecture to scalable microservices using Java, Spring Boot, Docker, and Kubernetes improving deployment flexibility and system scalability across high-traffic workloads.
- Built secure RESTful APIs with OAuth2 authentication and optimized SQL cluster performance to support high-availability data services.
- Integrated Azure Active Directory for enterprise SSO across internal services, enforcing role-based access control for secure multi-team deployments.

StonedGenie – Jr. Data Engineer, Riverside, CA

May 2020 – Jul 2021

- Leveraged Tableau to design interactive trend dashboards and forecast models to visualize inventory turnover, leading to a 15% reduction in stockouts and improved supply chain visibility.
- Built real-time Kafka ingestion pipelines to stream and process event data at scale, enabling sub-second data availability for downstream analytics and reducing pipeline lag by 45%.
- Designed and maintained PostgreSQL databases from scratch with query optimization, indexing, and stored procedures and automated SQL-based ETL workflows for consistent data processing.
